YaraVita[®] MANCOZIN[™]

A formulated product for the treatment of manganese, copper and zinc deficiencies by foliar application

Guaranteed Analysis

Total Nitrogen (N)	3%
Urea Nitrogen	3%
Copper (Cu)	6.3%
Manganese (Mn)	18.8%
Zinc (Zn)	4.8%

Derived from Urea, Copper Oxide, Manganese Carbonate, Zinc Oxide

The information provided is accurate to the best of Yara's knowledge and belief. Any recommendations are meant as a guide and must be adapted to suit local conditions.

Benefits

- Formulated for safe application at critical growth stages to satisfy crop requirements
- Widely tank mixable with other crop sprays. Visit www.tankmix.com/yara for details.
- Proven, reliable performance. Tried and tested on a wide range of crops around the world
- High quality, consistent product. Manufactured to ISO 9001 quality assurance standards
- Easy to use liquid formulation. Pours and disperses easily and quickly into the spray tank.
- High nutrient content means lower application rates reducing handling time and waste packaging

Product Recommendations

Typical Crop Recommendations*

- **Cereals:** 1 pint/acre at two leaf stage to first node detectable (Zadok's G.S. 12-31). For severe deficiency, increase to 1 quart/acre or repeat at the above rate. For autumn sown crops, an application prior to winter dormancy is strongly recommended. Water rate: 20 gallons/acre.
- **Fertilizer Impregnation:** May be coated onto dry fertilizer granules. N.B. Must not be used with a straight ammonium nitrate fertilizer, or any fertilizers containing ammonium nitrate which may have self-sustaining decomposition properties.
- **Grapevines:** 1 to 1½ pints/acre applied at 10 to 14 day intervals pre- and post-flowering. Avoid applications during flowering. Water rate: 20 to 100 gallons/acre.
- **Nuts (Deciduous):** 1 pt/acre at bud break and 10 to 14 days later. N.B. Do not apply during flowering. Also, 1pt/acre after harvest but before leaf senescence. Water rate: 20 to 100 gallons/acre.
