

HUWA-SAN TR-50

A sustainable way to secure your growth

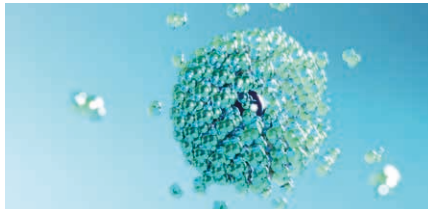

Huwa-San TR-50 is a unique biodegradable disinfectant that meets the highest EN disinfection standards for bactericides, fungicides and virucides. This powerful and high quality disinfectant is stable and broadly applicable.

Huwa-San TR-50 is the original and most advanced silver stabilised hydrogen peroxide. This environmentally sound, active substance is a very strong oxidizer, which post disinfection, degrades to just oxygen and water, leaving no harmful residuals. **Huwa-San TR-50** contains 49,9% hydrogen peroxide.

WORKING MECHANISM

The unique stabilisation technology built within **Huwa-San TR-50** results in a strong, stable biocide that is able to eliminate bacteria, viruses, fungi and spores.

The powerful, oxidising effect of **Huwa-San TR-50** causes a severe detrimental effect on pathogens. The Huwa-San Mode of Action is as follows:

- » Hydroxyl radicals are formed when Huwa-San comes in contact with micro-organisms.
- » These radicals are very aggressive molecules that will attack vital parts of the bacteria, crossing the membrane and physically destroying the organism.
- » The remaining hydrogen peroxide molecules are kept stable in the solution and are directed towards any other micro-organisms present. This highly efficient, biocidal working mechanism takes place repeatedly.

ADVANTAGES

- | | |
|---|---|
|  Prevents the spread of pathogens |  Free of chlorine and alcohol |
|  Biodegradable*, splits in water and oxygen |  Long lasting and controlled effect in the irrigation system |
|  Removes and prevents biofilm |  Quickly and easily measurable |

*Biodegradable and certified by:

KEY BENEFITS

Advanced
water hygiene

Biofilm
removal

No harmful
residuals

No-rinse surface
disinfection

Oxygen-rich
water

Superior
stability

APPLICATION AREAS

Huwa-San TR-50 is extremely well suited for:

WATER TREATMENT

- » Treatment of the entire watering system: drip line systems, irrigation systems, spray systems, silos, hydroculture, gutters, etc.
- » Prevention and treatment of biofilm and blockages

SURFACE TREATMENT

- » Disinfection of surfaces, tools and equipment, such as knives, fusts,...
- » Disinfection of materials by immersion

NEBULISATION

- » Disinfection of empty rooms, walls & floors by fogging.

SUPPORT AND GUIDANCE

Huwa-San TR-50 has the benefit that it can be measured and controlled in the irrigation system, making sure the product is effective. Due to our scientific approach, our technical experts take it one step further, by analysing the water at independent laboratories and by giving tailor-made advice based on your water quality.

We offer:

- » Tailor made advice on water-quality, based on water quality measurements
- » Reports with analyses performed by independent laboratories
- » Monitoring of the product application (concentration in the water,..)
- » Solutions for dosing and monitoring
- » Full comprehensive training
- » The latest insights and technical know-how on hygiene
- » Highly experienced horti team from the industry for the industry

Huwa-San is a biocide and subject to certain laws and regulations per country. As a result, in some countries, our full range isn't available. Please contact us for more information on our registrations. Use biocides safely. Read the label carefully before usage.
