

ROAM ECO CLEAN

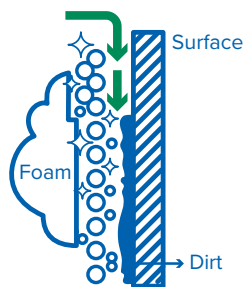

Active foam cleaner

Roam Eco Clean is the first foam cleaner in horticulture that is awarded the EU ecolabel thanks to its eco-friendly composition and outstanding cleaning effectiveness. Roam Eco Clean is ideally suited for removal of plant debris, plant juices and organic deposits on a wide variety of surfaces and materials.

An effective foam cleaner is the ideal start for a successful and hygienic process. Thorough cleaning is a crucial step in a good biosecurity protocol and helps you protect your crops from harmful pathogens. **Roam Eco Clean** is a strong alkaline cleaning product with outstanding foam properties, making it ideally suited for horticulture and post-harvest cleaning applications.

WORKING MECHANISM

Roam Eco Clean is an active foam detergent. Through innovative product development, **Roam Eco Clean** exhibits a perfect balance between adhesion time on the surface and solving and removing the dirt.

The cleaning process is as follows:

1. **Roam Eco Clean** dissolves the dirt
2. Foam bubbles start to pop
3. The solution with dissolved dirt starts moving down
4. A new foam layer is ready to act on the remaining dirt
5. The process is repeated

ADVANTAGES

- Strong alkaline foam cleaner for removing organic material
- Outstanding adhesion: extremely suitable for vertical & horizontal surfaces
- Cleaning of hard to reach areas
- Superior foam ability and stability
- Makes cleaning visible
- Quickly removes plant debris and plant juices

CLEAN

Horticulture

KEY BENEFITS

Active foam cleaner

Outstanding adhesion

Quickly removes plant debris and organic matter

Actively penetrates and dissolves dirt

APPLICATION AREA

Roam Eco Clean is extremely well suited for:

- » Removal of heavy soiling and organic matter on floors and walls
- » Cleaning of the greenhouse during crop rotation
- » Cleaning of plant trays, trolleys, fusts,...

The **EU Ecolabel** is a reliable label that identifies products with a reduced environmental impact. The label guarantees detergents with limited hazardous substances used, sustainably-sourced raw material, design and recyclability of packaging and proper guidance of the product user, without making a compromise on performance.

INSTRUCTIONS FOR USE

Preparing the area

1. Remove all loose materials and plant materials.
2. Remove or sweep all gross dirt.
3. Spray with water.

Clean with Roam Eco Clean

1. Make with preferably warm water a 1% – 3% dilution depending on the level of soiling.

Degree of pollution	Product concentration	Product dosage
Low pollution	1%	10 ml/L
Ordinary pollution	2%	20 ml/L
Heavy pollution	3%	30 ml/L

2. Apply the foam using a high pressure, low pressure unit or foam device.
3. Respect contact time of 30 min (do not let the product dry on the surface).
4. Wash down with water under high pressure.

SUPPORT AND GUIDANCE

The effect of **Roam Eco Clean** can be measured by using ATP swabs, ensuring optimal cleaning. Contact our support team for guidance:

- » Full comprehensive training
- » The latest insights and technical know-how on hygiene
- » Highly experienced horticultural team from the industry, for the industry
- » Solutions for application and monitoring
